Assurance, Challenge and Improvement in Health and Social Care

Information on legislation and standards underpinning inspections can be found on our website <https://www.rqia.org.uk/>

1.0 Service information

Organisation/Registered Provider: The Beeches Professional & Therapeutic Services Ltd Responsible Individual: Mr James Brian Wilson	Registered Manager: Mrs Siobhan Duffy Date registered: 25 July 2019
Person in charge at the time of inspection: Ms Yvonne Brown (Deputy Manager)	Number of registered places: 34
Categories of care: Residential Care (RC) LD – Learning disability LD(E) – Learning disability – over 65 years	Number of residents accommodated in the residential care home on the day of this inspection: 33
Brief description of the accommodation/how the service operates: The Beeches Professional & Therapeutic Services is a residential care home registered to provide health and social care for up to 34 residents who have a learning disability. Residents are accommodated within four separate cottages and have access to communal lounge and dining spaces within each cottage. There are enclosed and open garden areas for residents.	

2.0 Inspection summary

An unannounced inspection took place on 14 December 2023, from 9.45am to 1.15pm. This was completed by a pharmacist inspector.

The inspection focused on medicines management within the home. The purpose of the inspection was to assess if the home was delivering safe, effective and compassionate care and if the home was well led with respect to medicines management. The inspection also assessed progress with the area for improvement identified at the last inspection.

Review of medicines management found that robust arrangements were in place for the safe management of medicines. Medicine records and medicine related care plans were well maintained. There were effective auditing processes in place to ensure that staff were trained and competent to manage medicines and residents were administered their medicines as prescribed.

The outcome of this inspection concluded that the area for improvement identified at the last inspection had been addressed. No new areas for improvement were identified.

Based on the inspection findings and discussions held, RQIA are satisfied that this service is providing safe and effective care in a caring and compassionate manner; and that the service is well led by the management team regarding the management of medicines.

RQIA would like to thank the staff for their assistance throughout the inspection.

3.0 How we inspect

RQIA's inspections form part of our ongoing assessment of the quality of services. Our reports reflect how the home was performing at the time of our inspection, highlighting both good practice and any areas for improvement. It is the responsibility of the service provider to ensure compliance with legislation, standards and best practice, and to address any deficits identified during our inspections.

To prepare for this inspection, information held by RQIA about this home was reviewed. This included previous inspection findings, incidents and correspondence. To complete the inspection, the following were reviewed: a sample of medicine related records and care plans and the auditing systems used to ensure the safe management of medicines. The inspector spoke with two deputy managers and staff about how they plan, deliver and monitor the management of medicines in the home.

4.0 What people told us about the service

The inspector met with two deputy managers and three care staff.

Residents were observed to be relaxed and comfortable in the home. Staff were warm and friendly and it was obvious from their interactions that they knew the residents well and were aware of their likes/dislikes.

Staff expressed satisfaction with how the home was managed. They said that they had the appropriate training to look after residents and meet their needs.

Feedback methods included a staff poster and questionnaires which were provided for any resident or their family representative to complete and return using pre-paid, self-addressed envelopes. At the time of issuing this report, two questionnaires had been received by RQIA. The respondents indicated that they were very satisfied with all aspects of care.

5.0 The inspection

5.1 What has this service done to meet any areas for improvement identified at or since the last inspection?

Areas for improvement from the last inspection on 22 November 2022		
Action required to ensure compliance with The Residential Care Homes Regulations (Northern Ireland) 2005		Validation of compliance
Area for improvement 1 Ref: Regulation 13 (4) Stated: First time	The registered person shall ensure that topical preparations in use in the home are dated on opening and records are maintained of their administration.	Met
	Action taken as confirmed during the inspection: Topical preparations in use were dated on opening and records were maintained of their administration. The management of topical preparations was audited monthly and any learning disseminated to the care staff.	

5.2 Inspection findings

5.2.1 What arrangements are in place to ensure that medicines are appropriately prescribed, monitored and reviewed?

Residents in care homes should be registered with a general medical practitioner (GP) to ensure that they receive appropriate medical care when they need it. At times the residents' needs may change and therefore their medicines should be regularly monitored and reviewed. This is usually done by the GP, the pharmacist or during a hospital admission.

Residents in the home were registered with a GP and medicines were dispensed by the community pharmacist.

Personal medication records were in place for each resident. These are records used to list all of the prescribed medicines, with details of how and when they should be administered. It is important that these records accurately reflect the most recent prescription to ensure that medicines are administered as prescribed and because they may be used by other healthcare professionals, for example, at medication reviews or hospital appointments.

The personal medication records reviewed at the inspection were accurate and up to date. In line with best practice, a second member of staff had checked and signed the personal medication records when they were written and updated to state that they were accurate.

Copies of residents' prescriptions/hospital discharge letters were retained in the home so that any entry on the personal medication record could be checked against the prescription. This is good practice.

Residents will sometimes get distressed and will occasionally require medicines to help them manage their distress. It is important that care plans are in place to direct staff on when it is appropriate to administer these medicines and that records are kept of when the medicine was given, the reason it was given and what the outcome was. If staff record the reason and outcome of giving the medicine, then they can identify common triggers which may cause the resident's distress and if the prescribed medicine is effective for the resident.

The management of medicines prescribed on a "when required" basis for distressed reactions was reviewed. Directions for use were clearly recorded on the personal medication records; and care plans directing the use of these medicines were in place. Staff knew how to recognise a change in a resident's behaviour and were aware that this change may be associated with pain. Records included the reason for and outcome of each administration.

The management of pain was discussed. Staff advised that they were familiar with how each resident expressed their pain and that pain relief was administered when required. Care plans were in place and reviewed regularly.

Some residents may need their diet modified to ensure that they receive adequate nutrition. This may include thickening fluids to aid swallowing and food supplements in addition to meals. Care plans detailing how the resident should be supported with their food and fluid intake should be in place to direct staff. All staff should have the necessary training to ensure that they can meet the needs of the resident. The management of thickening agents was reviewed for three residents. Speech and language assessment reports and care plans were in place. Records of prescribing and administration which included the recommended consistency level were maintained.

Care plans were in place when residents required rescue medication to treat epileptic seizures.

5.2.2 What arrangements are in place to ensure that medicines are supplied on time, stored safely and disposed of appropriately?

Medicine stock levels must be checked on a regular basis and new stock must be ordered on time. This ensures that the resident's medicines are available for administration as prescribed. It is important that they are stored safely and securely so that there is no unauthorised access and disposed of promptly to ensure that a discontinued medicine is not administered in error.

The records inspected showed that medicines were available for administration when residents required them.

The medicines storage area was observed to be securely locked to prevent any unauthorised access. It was tidy and organised so that medicines belonging to each resident could be easily located. The temperature of the medicine storage area was monitored and recorded to ensure that medicines were stored appropriately. A medicine refrigerator and controlled drugs cabinet were available for use as needed.

Satisfactory arrangements were in place for the safe disposal of medicines.

5.2.3 What arrangements are in place to ensure that medicines are appropriately administered within the home?

It is important to have a clear record of which medicines have been administered to residents to ensure that they are receiving the correct prescribed treatment.

A sample of the medicine administration records was reviewed. The records were found to have been fully and accurately completed.

Controlled drugs are medicines which are subject to strict legal controls and legislation. They commonly include strong pain killers. The receipt, administration and disposal of controlled drugs should be recorded in the controlled drug record book. There were satisfactory arrangements in place for the management of controlled drugs.

Management and staff audited medicine administration on a regular basis within the home. A range of audits were carried out. The date of opening was recorded on all medicines so that they could be easily audited. This is good practice.

5.2.4 What arrangements are in place to ensure that medicines are safely managed during transfer of care?

People who use medicines may follow a pathway of care that can involve both health and social care services. It is important that medicines are not considered in isolation, but as an integral part of the pathway, and at each step. Problems with the supply of medicines and how information is transferred put people at increased risk of harm when they change from one healthcare setting to another.

There had been no recent admissions to the home. However, the admission process for new residents or residents returning from hospital was reviewed. Staff advised that robust arrangements were in place to ensure that they were provided with a current list of the resident's medicines and this was shared with the community pharmacist.

5.2.5 What arrangements are in place to ensure that staff can identify, report and learn from adverse incidents?

Occasionally medicines incidents occur within homes. It is important that there are systems in place which quickly identify that an incident has occurred so that action can be taken to prevent a recurrence and that staff can learn from the incident. A robust audit system will help staff to identify medicine related incidents.

Staff were familiar with the type of incidents that should be reported. The medicine related incidents which had been reported to RQIA since the last inspection were discussed. There was evidence that these had been reported to the prescriber for guidance, investigated and learning shared with staff in order to prevent a recurrence.

The audits completed at the inspection indicated that the medicines were being administered as prescribed.

5.2.6 What measures are in place to ensure that staff in the home are qualified, competent and sufficiently experienced and supported to manage medicines safely?

To ensure that residents are well looked after and receive their medicines appropriately, staff who administer medicines to residents must be appropriately trained. The registered person has a responsibility to check that staff are competent in managing medicines and they are supported.

There were records in place to show that staff responsible for medicines management had been trained and deemed competent. Ongoing review was monitored through supervision sessions with staff and at annual appraisal.

6.0 Quality Improvement Plan/Areas for Improvement

	Regulations	Standards
Total number of Areas for Improvement	0	0

This inspection resulted in no areas for improvement being identified. Findings of the inspection were discussed with Ms Yvonne Brown and Ms Angela Toner, Deputy Managers, as part of the inspection process and can be found in the main body of the report.
