Inspection Report

Name of Service: Rigby Close
Provider: Belfast Health and Social Care Trust (BHSCT)
Date of Inspection: 14 August 2025

Information on legislation and standards underpinning inspections can be found on our website <https://www.rqia.org.uk/>

1.0 Service information

Organisation/Registered Provider:	Belfast Health and Social Care Trust (BHSCT)
Responsible Individual:	Mrs Maureen Edwards
Registered Manager:	Mrs Arlene Kerr
Service Profile:	
<p>Rigby close is a residential care home registered to provide social care for up to two residents under and over the age of 65 years with learning disability.</p> <p>Resident areas are located on ground floor level and there is a communal lounge and kitchen. Residents have access to an enclosed yard and a small patio area.</p>	

2.0 Inspection summary

An unannounced inspection took place on 14 August 2025, from 10.43am to 12.00pm. The inspection was completed by a pharmacist inspector and focused on medicines management within the home.

The inspection was undertaken to evidence how medicines are managed in relation to the regulations and standards and to determine if the home is delivering safe, effective and compassionate care and is well led in relation to medicines management.

Mostly satisfactory arrangements were in place for the safe management of medicines. Medicines were stored securely. Medicine records and medicine related care plans were well maintained. There were effective auditing processes in place to ensure that staff were trained and competent to manage medicines and residents were administered their medicines as prescribed. However, an improvement was necessary in relation to recording of room temperatures in medication storage areas.

Whilst an area for improvement was identified, there was evidence that residents were being administered their medicines as prescribed.

Details of the inspection findings, including the new area for improvement identified, can be found in the main body of this report and in the quality improvement plan (QIP) (Section 4.0).

RQIA would like to thank the staff for their assistance throughout the inspection.

3.0 The inspection

3.1 How we inspect

RQIA's inspections form part of our ongoing assessment of the quality of services. Our reports reflect how the home was performing against the regulations and standards, at the time of our inspection, highlighting both good practice and any areas for improvement. It is the responsibility of the service provider to ensure compliance with legislation, standards and best practice, and to address any deficits identified during our inspections.

To prepare for this inspection, information held by RQIA about this home was reviewed. This included, registration information, and any other written or verbal information received from residents, relatives, staff or the commissioning trust.

Throughout the inspection process, inspectors seek the views of those living, working and visiting the home; and review/examine a sample of records to evidence how the home is performing in relation to the regulations and standards.

3.2 What people told us about the service and their quality of life

Staff advised that they were familiar with how each resident liked to take their medicines. They stated medication rounds were tailored to respect each individual's preferences, needs and timing requirements.

RQIA did not receive any completed questionnaires or responses to the staff survey following the inspection.

3.3 Inspection findings

3.3.1 What arrangements are in place to ensure that medicines are appropriately prescribed, monitored and reviewed?

Residents in residential care homes should be registered with a general practitioner (GP) to ensure that they receive appropriate medical care when they need it. At times residents' needs may change and therefore their medicines should be regularly monitored and reviewed. This is usually done by a GP, a pharmacist or during a hospital admission.

Residents in the home were registered with a GP and medicines were dispensed by the community pharmacist. Residents bring their own medicines with them at the start of their short break and any unused medicines are returned to them at the end of their stay.

Personal medication records were in place for each resident. These are records used to list all of the prescribed medicines, with details of how and when they should be administered.

It is important that these records accurately reflect the most recent prescription to ensure that medicines are administered as prescribed and because they may be used by other healthcare professionals, for example, at medication reviews or hospital appointments.

The personal medication records reviewed were accurate and up to date. In line with best practice, a second member of staff had checked and signed the personal medication records when they were written and updated to confirm that they were accurate. One minor discrepancy was highlighted to staff for immediate action.

Copies of residents' prescriptions/hospital discharge letters were retained so that any entry on the personal medication record could be checked against the prescription.

All residents should have care plans which detail their specific care needs and how the care is to be delivered. In relation to medicines these may include care plans for the management of distressed reactions, pain, modified diets etc.

The management of distressed reactions was reviewed. Care plans contained sufficient detail to direct the required care. Medicine records were well maintained. The audits completed indicated that medicines were administered as prescribed.

Care plans were in place when residents were prescribed emergency medication. There was sufficient detail in the care plan to direct staff.

3.3.2 What arrangements are in place to ensure that medicines are supplied on time, stored safely and disposed of appropriately?

Medicine stock levels must be checked on a regular basis and new stock must be ordered on time. This ensures that the resident's medicines are available for administration as prescribed. It is important that they are stored safely and securely so that there is no unauthorised access and disposed of promptly to ensure that a discontinued medicine is not administered in error.

Records reviewed showed that medicines were available for administration when residents required them. Staff advised they discuss medicines as part of pre-admission assessment.

The medicine storage area was observed to be securely locked to prevent any unauthorised access. It was tidy and organised so that medicines belonging to each resident could be easily located. Satisfactory arrangements were in place for medicines requiring cold storage and the return of medicines to residents at the conclusion of their respite stay in the home. A controlled drug cabinet was available for use as needed.

Medicines must be stored at the manufacturers' recommended temperature in order to ensure their stability and efficacy; this is usually at or below 25°C for medicines recommended to be stored at room temperature. The temperature of the medicine storage area was not monitored and recorded to ensure that medicines were stored appropriately. An area for improvement was identified.

3.3.3 What arrangements are in place to ensure that medicines are appropriately administered within the home?

It is important to have a clear record of which medicines have been administered to residents to ensure that they are receiving the correct prescribed treatment.

A sample of the medicines administration records was reviewed. Records were found to have been accurately completed. Records were filed once completed and were readily retrievable for audit/review.

Controlled drugs are medicines which are subject to strict legal controls and legislation. They commonly include strong pain killers. The receipt, administration and disposal of controlled drugs should be recorded in the controlled drug record book. There were satisfactory arrangements in place for the management of controlled drugs.

Management and staff audited the management and administration of medicines on a regular basis within the home. The date of opening was recorded on medicines to facilitate audit and disposal at expiry.

3.3.4 What arrangements are in place to ensure that medicines are safely managed during transfer of care?

People who use medicines may follow a pathway of care that can involve both health and social care services. It is important that medicines are not considered in isolation, but as an integral part of the pathway, and at each step. Problems with the supply of medicines and how information is transferred put people at increased risk of harm when they change from one healthcare setting to another.

A review of records indicated that satisfactory arrangements were in place to manage medicines at the time of admission or for residents returning from hospital. Confirmation of prescribed medicines was obtained at or prior to admission.

3.3.5 What arrangements are in place to ensure that staff can identify, report and learn from adverse incidents?

Occasionally medicines incidents occur within homes. It is important that there are systems in place which quickly identify that an incident has occurred so that action can be taken to prevent a recurrence and that staff can learn from the incident. A robust audit system will help staff to identify medicine related incidents.

Management and staff were familiar with the type of incidents that should be reported. The medicine related incidents which had been reported to RQIA since the last inspection were discussed. There was evidence that the incidents had been reported to the prescriber for guidance, investigated and the learning shared with staff in order to prevent a recurrence.

3.3.6 What measures are in place to ensure that staff in the home are qualified, competent and sufficiently experienced and supported to manage medicines safely?

To ensure that residents are well looked after and receive their medicines appropriately, staff who administer medicines to residents must be appropriately trained. The registered person has a responsibility to check that their staff are competent in managing medicines and that they are supported. Policies and procedures should be up to date and readily available for staff reference.

There were records in place to show that staff responsible for medicines management had been trained and deemed competent. Medicines management policies and procedures were in place.

Records of staff training in relation to medicines management, epilepsy awareness, buccal midazolam and dysphagia were available.

It was agreed that the findings of this inspection would be discussed with staff to facilitate the necessary improvements.

4.0 Quality Improvement Plan/Areas for Improvement

An area for improvement has been identified where action is required to ensure compliance with Standards.

	Regulations	Standards
Total number of Areas for Improvement	0	1

The area for improvement and details of the Quality Improvement Plan were discussed with person in charge, as part of the inspection process. The timescales for completion commence from the date of inspection.

Quality Improvement Plan	
Action required to ensure compliance with the Care Standards for Residential Homes, December 2022	
Area for improvement 1 Ref: Standard 32 Stated: First time To be completed by: 14 August 2025	The registered person shall ensure that room temperatures are recorded daily in medication storage areas. Ref: 3.3.2 Response by registered person detailing the actions taken: The registered person has introduced daily room temperature and fridge temperature checks. The temperatures are recorded daily and records are retained.
