

Inspection Report

2 December 2025

OnebyOne Dental

Type of service: Independent Hospital (IH) – Dental Treatment

Address: 1 Manor Drive, Lisburn, BT28 1JH

Telephone number: 028 9266 3364

www.rqia.org.uk

Assurance, Challenge and Improvement in Health and Social Care

Information on legislation and standards underpinning inspections can be found on our website <https://www.rqia.org.uk/>, [The Independent Health Care Regulations \(Northern Ireland\) 2005](#) and the [Minimum Standards for Dental Care and Treatment \(March 2011\)](#)

1.0 Service information

Organisation/Registered Provider: Miss Jemma McKeown and Mr Christopher Gardiner Responsible Persons: Miss Jemma McKeown Mr Christopher Gardiner	Registered Manager: Miss Jemma McKeown Date registered: 3 December 2015
Person in charge at the time of inspection: Practice manager	Number of registered places: Two
Categories of care: Independent Hospital (IH) – Dental Treatment	
Brief description of how the service operates: OnebyOne Dental is registered with the Regulation and Quality Improvement Authority (RQIA) as an independent hospital (IH) with a dental treatment category of care. The practice has two registered dental surgeries and provides general dental services, private and health service treatment and offers conscious sedation, if clinically indicated. Miss Jemma McKeown and Mr Christopher Gardiner are also the registered provider for OnebyOne dental located in Belfast.	

2.0 Inspection summary

This was an announced inspection, undertaken by a care inspector on 2 December 2025 from 10.00 am to 2.00 pm.

It focused on the themes for the 2025/26 inspection year and assessed progress with any areas for improvement identified during the last care inspection.

There was evidence of good practice in relation to the recruitment and selection of staff; staff training; decontamination of reusable dental instruments; radiology and radiation safety; management of complaints and incidents; and governance arrangements.

No immediate concerns were identified regarding the delivery of front line patient care.

3.0 How we inspect

RQIA is required to inspect registered services in accordance with legislation. To do this, we gather and review the information we hold about the service, examine a variety of relevant records, meet and talk with staff and management and observe practices on the day of the inspection.

The inspection was facilitated by the practice manager.

The information obtained is then considered before a determination is made on whether the practice is operating in accordance with the relevant legislation and minimum standards.

Examples of good practice are acknowledged and any areas for improvement are discussed with the person in charge and detailed in the quality improvement plan (QIP).

4.0 What people told us about the care and treatment?

We issued posters to the registered provider prior to the inspection inviting patients and members of the dental team to complete an electronic questionnaire.

Five patients/visitors submitted responses. Responses indicated that patients/visitors felt the care delivered was safe and effective, that they were treated with compassion and that the service was well led. All patients/visitors indicated that they were very satisfied with each of these areas of care. One patient left a comment which pertained to the very good service provided.

Four staff members submitted questionnaire responses. Staff member responses indicated that they felt patient care was safe, effective, that patients were treated with compassion and that the service was well led. All staff indicated that they were either satisfied or very satisfied with each of these areas of patient care. No comments were left by the staff members.

5.0 The inspection

5.1 What action has been taken to meet any areas for improvement identified at or since last inspection?

The last inspection to OnebyOne Dental was undertaken on 16 January 2024; no areas for improvement were identified.

5.2 Inspection findings

5.2.1 Do recruitment and selection procedures comply with all relevant legislation?

There were recruitment and selection policies and procedures in place that adhered to legislation and best practice guidance.

Miss McKeown and Mr Gardiner oversee the recruitment and selection of the dental team and approve all staff appointments with the support of the practice manager. Discussion with the practice manager confirmed that she had a clear understanding of the legislation and best practice guidance.

A review of the staff register evidenced that two new staff had been recruited since the previous inspection. A review of one personnel file evidenced that relevant recruitment records had been sought; reviewed and stored as required.

The practice manager confirmed there were induction checklists for the different staff roles. A review of records confirmed that if a professional qualification is a requirement of the post, a registration check is made with the appropriate professional regulatory body.

The practice manager confirmed staff have been provided with a job description, contract of employment/agreement and received induction training when they commenced work in the practice.

The recruitment of the dental team complies with the legislation and best practice guidance to ensure suitably skilled and qualified staff work in the practice.

5.2.2 Is the dental team appropriately trained to fulfil the duties of their role?

The dental team takes part in ongoing training to update their knowledge and skills, relevant to their role.

Policies and procedures are in place that outline mandatory training to be undertaken, in line with any professional requirements, and the [training guidance](#) provided by RQIA.

A record is kept of all training (including induction) and professional development activities undertaken by staff, which is overseen by the practice manager to ensure that the dental team is suitably skilled and qualified.

The care and treatment of patients is being provided by a dental team that is appropriately trained to carry out their duties.

5.2.3 Is the practice fully equipped and is the dental team trained to manage medical emergencies?

The British National Formulary (BNF) and the Resuscitation Council (UK) specify the emergency medicines and medical emergency equipment that must be available to safely and effectively manage a medical emergency. Systems were in place to ensure that emergency medicines are immediately available as specified and do not exceed their expiry dates. A review of the emergency equipment identified that some items were required to be ordered and some items required replacing. These matters were discussed with the practice manager and following the inspection RQIA received confirmation that these matters had been addressed.

There was a medical emergency policy and procedure in place and a review of this evidenced that it reflected legislation and best practice guidance. Protocols were available to guide the dental team on how to manage recognised medical emergencies.

Managing medical emergencies is included in the induction programme and refresher training is undertaken annually.

The practice manager confirmed staff members would be able to describe the actions they would take, in the event of a medical emergency, and were familiar with the location of medical emergency medicines and equipment.

As a result of actions taken following the inspection, it is determined that sufficient emergency medicines and equipment are in place and the dental team is trained to manage a medical emergency as specified in the legislation, professional standards and guidelines.

5.2.4 Does the dental team provide dental care and treatment using conscious sedation in line with the legislation and guidance?

Conscious sedation helps reduce anxiety, discomfort, and pain during certain procedures. This is accomplished with medications or medical gases to relax the patient.

The practice manager confirmed that conscious sedation is offered if clinically indicated using intravenous (IV) sedation. IV sedation is only offered to patients over the age of 16.

There was a conscious sedation policy and procedure in place which required further development to ensure that it is comprehensive and reflects the legislation and best practice guidance. The practice manager provided assurances that this matter would be addressed. Review of the environment and equipment evidenced that conscious sedation is being managed in keeping with the [Conscious Sedation in Dentistry, Dental Clinic Guidance, \(Third Edition\); Scottish Dental Clinical Effectiveness Programme \(SDCEP\)](#), with the exception of the provision of supplemental oxygen and a range of blood pressure cuff sizes. This was discussed with the practice manager who provided assurances this matter would be reviewed.

A review of records and discussion with the practice manager demonstrated that an assessment of the patient to confirm the dental treatment required and the need for sedation is undertaken by the dentist providing the sedation.

The practice manager confirmed that valid written consent is sought for provision of dental care with sedation in accordance with the above best practice guidance.

It was demonstrated that clinical records of patients who had treatment using sedation includes a detailed record of the pre-sedation assessment, the patient's written consent, the patient's visit for sedation including monitoring, the treatment procedure and the recovery of each patient.

Information was available for patients in respect of the treatment provided and aftercare arrangements and a record is maintained to verify that post-treatment instructions were given and explained to the patient and their escort, as appropriate.

The dental team involved in the provision of conscious sedation must receive appropriate practical and clinical training. The practice manager confirmed that all relevant members of the dental team had completed 12 hours of sedation related verifiable continuing professional development (CPD) training in each five year CPD cycle.

A discussion took place regarding the life support training to be undertaken by all clinical team members involved in managing patients having sedation.

Immediate Life Support (ILS) training as laid down by the Resuscitation Council (UK) had been undertaken by appropriate staff members. The practice manager confirmed the content of the medical emergency refresher training demonstrated that all the main elements of ILS training as outlined in Appendix 2 of [Conscious Sedation in Dentistry, Dental Clinic Guidance, \(Third Edition\); Scottish Dental Clinical Effectiveness Programme \(SDCEP\)](#) were included.

The medicines used during IV sedation are classified as controlled drugs (CDs). The arrangements for the management of the CDs were reviewed. It was demonstrated that CDs are securely stored and systems were in the main, in place, for the ordering; administration; reconciliation (stock check) and disposal of these medicines. Advice and guidance was provided to the practice manager to ensure that all wastage is recorded in the drug record book and that processes are in place to record receipt of the CDs received by the practice. The practice manager was receptive to this advice and assurances were given that these matters would be addressed following the inspection.

It was identified that a standard operating procedure (SOP) for CDs was in place, however it required further development to reflect the arrangements in place. The practice manager provided assurances this matter would be addressed following the inspection.

As a result of the assurances provided by the practice manager, it is determined that arrangements are in place to enable the dental team to safely provide dental care and treatment using conscious sedation, in keeping with legislation and guidance.

5.2.5 Does the dental team adhere to infection prevention and control (IPC) best practice guidance?

The IPC arrangements were reviewed throughout the practice to evidence that the risk of infection transmission to patients, visitors and staff was minimised.

The infection prevention and control measures to prevent transmission of respiratory illnesses in the practice was discussed with the practice manager.

It was confirmed that arrangements are in place in keeping with the Health and Social Care Public Health Agency guidance [Infection Prevention and Control Measures for Respiratory illnesses March 2023](#) and the [Infection Prevention and Control Manual for Northern Ireland](#). The practice manager confirmed arrangements are in place to check Department of Health (DoH) websites for further advisory information, guidance and alerts in this regard.

There was an overarching IPC policy and associated procedures in place. Review of these documents demonstrated that they reflected legislation and best practice guidance. The practice manager confirmed there was a nominated lead dental nurse who had responsibility for IPC and decontamination in the practice. The lead dental nurse had undertaken IPC and decontamination training in line with their continuing professional development and had retained the necessary training certificates as evidence.

During a tour of some areas of the practice, it was observed that clinical and decontamination areas were clean, tidy and uncluttered. All areas of the practice observed were equipped to meet the needs of patients. Discussion with the practice manager confirmed that the surgeries are cleaned daily, however the surgery cleaning schedules were not retained. Advice and guidance was provided to the practice manager and following the inspection RQIA received confirmation that this matter had been addressed.

The arrangements for personal protective equipment (PPE) were reviewed and it was noted that appropriate PPE was readily available for the dental team in accordance with the treatments provided.

Using the Infection Prevention Society (IPS) audit tool, IPC audits are routinely undertaken by members of the dental team to self-assess compliance with best practice guidance. The purpose of these audits is to assess compliance with key elements of IPC, relevant to dentistry, including the arrangements for environmental cleaning; the use of PPE; hand hygiene practice; and waste and sharps management. This audit also includes the decontamination of reusable dental instruments which is discussed further in the following section of this report. A review of these audits evidenced that they were completed on a six monthly basis and, where applicable, an action plan was generated to address any improvements required.

Hepatitis B vaccination is recommended for clinical members of the dental team as it protects them if exposed to this virus. A system was in place to ensure that relevant members of the dental team have received this vaccination. The practice manager confirmed that vaccination history is checked during the recruitment process and vaccination records are retained in personnel files.

The practice manager confirmed staff had received IPC training relevant to their roles and responsibilities and they demonstrated good knowledge and understanding of these procedures. Review of training records evidenced that the dental team had completed relevant IPC training and had received regular updates.

As a result of the actions taken following the inspection, it is determined that the dental team is adhering to best practice guidance to minimise the risk of infection transmission to patients, visitors and staff.

5.2.6 Does the dental team meet current best practice guidance for the decontamination of reusable dental instruments?

Robust procedures and a dedicated decontamination room must be in place to minimise the risk of infection transmission to patients, visitors and staff in line with [Health Technical Memorandum 01-05: Decontamination in primary care dental practices, \(HTM 01-05\)](#), published by the DoH.

There was a range of policies and procedures in place for the decontamination of reusable dental instruments that were comprehensive and reflected legislation, minimum standards and best practice guidance.

There was a designated decontamination room separate from patient treatment areas and dedicated to the decontamination process. The design and layout of this room complied with best practice guidance and the equipment was sufficient to meet the requirements of the practice. Records evidencing that the equipment for cleaning and sterilising instruments was inspected, validated, maintained and used in line with the manufacturers' guidance were reviewed. Review of equipment logbooks demonstrated that all required tests to check the efficiency of the machines had been undertaken, and in the main, the logbooks were well completed. Advice and guidance was provided to the practice manager in the areas that required further attention and the practice manager was receptive to this advice.

The practice manager confirmed staff had received training on the decontamination of reusable dental instruments in keeping with their role and responsibilities and that they demonstrated good knowledge and understanding of the decontamination process.

Decontamination arrangements demonstrated that the dental team are adhering to current best practice guidance on the decontamination of dental instruments.

5.2.7 How does the dental team ensure that appropriate radiographs (x-rays) are taken safely?

The arrangements regarding radiology and radiation safety were reviewed to ensure that appropriate safeguards were in place to protect patients, visitors and staff from the ionising radiation produced by taking an x-ray.

Dental practices are required to notify and register any equipment producing ionising radiation with the Health and Safety Executive Northern Ireland (HSENI). A review of records evidenced the practice had registered with the HSENI.

The practice has two surgeries each of which has an intra-oral x-ray machine. In addition, there is a combined cone beam computed tomography/orthopan tomogram (CBCT/OPG) machine which is located in a separate room. The equipment inventory reflected all the radiography equipment in place. A review of documentation evidenced that the x-ray equipment had been serviced and maintained in accordance with manufacturer's instructions.

A radiation protection advisor (RPA), medical physics expert (MPE) and radiation protection supervisor (RPS) have been appointed in line with legislation.

Two dedicated radiation protection files containing the relevant local rules, employer's procedures and other additional information were retained. One file included information relating to the intra-oral x-ray machines and the second file included information relating to the CBCT/OPG.

A review of the files confirmed that the Employer had entitled the dental team to undertake specific roles and responsibilities associated with radiology and ensured that these staff had completed appropriate training. The RPS oversees radiation safety within the practice and regularly reviews the radiation protection files to ensure that they are accurate and up to date.

The appointed RPA must undertake a critical examination and acceptance test of all new x-ray equipment; thereafter the RPA must complete a quality assurance test every three years as specified within the legislation.

The practice manager confirmed that no new radiology equipment had been installed since the previous RQIA inspection.

The most recent reports generated by the RPA during February 2023 evidenced that the x-ray equipment had been examined and any recommendations made had been actioned.

A copy of the local rules was on display near each x-ray machine observed and appropriate staff had signed to confirm that they had read and understood these.

Quality assurance systems and processes were in place to ensure that all matters relating to x-rays reflect legislation and best practice guidance. It was evidenced that all measures are taken to optimise radiation dose exposure. This included the use of rectangular collimation, x-ray audits and digital x-ray processing.

The radiology and radiation safety arrangements evidenced that procedures are in place to ensure that appropriate x-rays are taken safely.

5.2.8 Are complaints and incidents being effectively managed?

The arrangements for the management of complaints and incidents were reviewed to ensure that they were being managed in keeping with legislation and best practice guidance.

The complaints policy and procedure provided clear instructions for patients and staff to follow. Minor amendments were needed to ensure correct contact details for onward referral routes were up to date and following the inspection the practice manager confirmed this matter had been addressed.

Arrangements were in place to record any complaint received in a complaints register and retain all relevant records including details of any investigation undertaken, all communication with complainants, the outcome of the complaint and the complainant's level of satisfaction.

A review of records confirmed that no complaints had been received since the previous inspection.

Discussion with the practice manager confirmed that an incident policy and procedure was in place which includes the reporting arrangements to RQIA. The practice manager confirmed that incidents are effectively documented and investigated in line with legislation. All relevant incidents are reported to RQIA and other relevant organisations in accordance with legislation and RQIA [Statutory Notification of Incidents and Deaths](#). Arrangements are in place to audit adverse incidents to identify trends and improve service provided.

The dental team was knowledgeable on how to deal with and respond to complaints and incidents in accordance with legislation, minimum standards and the DoH guidance.

Arrangements were in place to share information with the dental team about complaints and incidents including any learning outcomes, and also compliments received.

Systems were in place to ensure that complaints and incidents were being managed effectively in accordance with legislation and best practice guidance.

5.2.9 How does a registered provider who is not in day to day management of the practice assure themselves of the quality of the services provided?

Where the business entity operating a dental practice is a corporate body or partnership or an individual owner who is not in day to day management of the practice, unannounced quality monitoring visits by the registered provider must be undertaken and documented every six months; as required by Regulation 26 of The Independent Health Care Regulations (Northern Ireland) 2005.

Miss McKeown was in day to day management of the practice, therefore the unannounced quality monitoring visits by the registered provider are not applicable.

5.3 Does the dental team have suitable arrangements in place to record equality data?

The arrangements in place in relation to the equality of opportunity for patients and the importance of staff being aware of equality legislation and recognising and responding to the diverse needs of patients was discussed with the practice manager.

6.0 Quality Improvement Plan/Areas for Improvement

This inspection resulted in no areas for improvement being identified. Findings of the inspection were discussed with the practice manager, as part of the inspection process and can be found in the main body of the report.
